1. Introduction of the Program

The Department of Computer Science and Engineering (Cyber Security), Dayananda Sagar University, organized a Water Conservation Awareness Program on 20 April 2026 at Kirangere, Harohalli Hobli, Bengaluru South – 562112. The program was conducted to educate school students and residents about the importance of conserving water and protecting natural resources. With increasing water scarcity caused by climate change, population growth, and excessive groundwater usage, the program emphasized the need for responsible water management. Faculty members and students actively participated in creating awareness and encouraging sustainable practices among the community.

2. Objectives of the Program

The main objectives of the program were to create awareness about water conservation, educate participants about the causes and effects of water scarcity, encourage responsible use of water in daily life, promote rainwater harvesting and groundwater recharge, inspire students to protect the environment, and motivate the community to adopt sustainable water management practices.

3. Program Activities

The program began with a welcome address followed by an awareness session conducted by faculty members and students. Participants were informed about the importance of water conservation and practical methods to reduce water wastage. Interactive discussions allowed students and local residents to share ideas and learn simple water-saving techniques such as repairing leaking taps, reusing water, protecting lakes and ponds, and practicing rainwater harvesting. A Water Conservation Pledge was also administered, where all participants promised to conserve water and encourage others to do the same.

4. Awareness Message Delivered

The awareness campaign highlighted the message that "Every Drop Counts" and emphasized that conserving water today ensures a better future for coming generations. Participants were encouraged to use water wisely, avoid unnecessary wastage, protect natural water bodies, and spread awareness within their families and communities.

5. Participation

The program witnessed active participation from faculty members, university students, school teachers, school children, and local residents of Kirangere. The participants showed enthusiasm throughout the

awareness session, interactive discussions, and the water conservation pledge, making the event informative and engaging.

6. Outcome

The program successfully increased awareness about water conservation and environmental sustainability. Participants gained knowledge about practical water-saving methods and expressed their commitment to adopting responsible water usage in their daily lives. The event also strengthened community involvement in environmental protection.

7. Conclusion

The Water Conservation Awareness Program was successfully conducted and achieved its objectives of promoting responsible water usage and environmental conservation. The initiative reflected the commitment of Dayananda Sagar University towards social responsibility and sustainable development. The program concluded with a message that collective efforts can make a significant difference in protecting water resources for future generations.
